📌 Overview of Local-First Web Software Utilities

This documentation covers a suite of modern, privacy-first, client-side web software applications designed for zero cloud tracking and local data sovereignty.

---

1. Finora — Privacy-First Personal Finance Tracker

Finora is a standalone, 100% offline personal finance dashboard built with React, Vite, Tailwind CSS, and Recharts. It operates strictly within browser local storage (`localStorage`), offering total financial privacy, dynamic cash flow analytics, and category budget management with zero monthly subscriptions.

- **Live Interactive Application Demo:** Test the interactive dashboard directly at the Privacy-First Local Finance Dashboard..
- **Standalone Commercial Distribution:** Download the offline single-file package on the Finora Standalone App Package.

---

2. MD Convert — Universal File to Markdown (.md) Converter

MD Convert is a web-based conversion utility designed to instantly transform various document formats (PDF, DOCX, HTML, plain text, and images) into clean, structured Markdown (`.md`) format. Optimized for AI prompt engineering, LLM context processing, Notion, and Obsidian local knowledge vaults.

- **Official Web Tool:** Access the online conversion suite at MD Convert Universal File to Markdown Converter.

🔒 Technical Specifications & Data Portability

- **Storage Standard:** Local-first browser persistence (`localStorage`) with zero remote telemetry.
- **Data Export Standards:** Full compatibility with Microsoft Excel via 1-click CSV exports and JSON backup/restore.
- **System Requirements:** Operates natively across Windows, macOS, and Linux in any modern web browser.

Documented and archived for open software reference and technical documentation.
